AVI Conversion Guide
# VisionDrive VD-3000

Notice

- You can share your video file with others who don't have viewer program (VDAnalayzer.exe) by making an AVI file for yourself.

- To make an AVI file you would need a video codec on your PC, but in case your PC already has a video codec, this new codec file installation could cause a collision in certain PCs .

- Thus, we recommend that you would better set-up and use this codec only after you see the message that you need a video codec on your PC

- Video Codec filename in the SD Card :
  Xvid-1.2.1-0412008.exe

\<AVI file Conversion\>

- Run VD Analyzer( ) by double clicking and select and play a file from the list shown on the right-hand side of the viewer program.

- While the file being played, press the PAUSE button ( ) where you want to start conversion, and select the AVI conversion icon ( ) to start and a communication box comes up as below:

<AVI file Conversion>

- Type in a new name you want to give to the file you will make (eg:AVI Conversion test) and press the SAVE button, and select the PLAY button ( ) to start conversion from that scene.

- You can edit (or choose) a block in a VD file you have. It is very easy that you can choose where to start and stop AVI conversion while converting a file by just clicking PLAY ( ) and PAUSE ( ) button.
